

What to Consider When Renting a Self Storage Unit

When you rent a self storage unit for the first time, the number of options can be staggering. The most essential question, how large a unit to rent, was probably the first one you were able to answer. But what about the other options? This FAQ will help you to decide exactly what you want.

Do you have temperature sensitive belongings that should be in a climate controlled self storage unit?

Some items, like paper, art, some kinds of plastics, and antiques are temperature sensitive and should be stored in a climate controlled unit. Glass, stone, and other sturdy materials can handle temperature fluctuations and do not need climate control. If you have a few temperature sensitive items to store, then unless you have a lot of belongings to store and are willing to rent two units, a climate controlled unit and a non controlled unit, you should rent a climate controlled unit for all your belongings.

Do you want to take your belongings to the self storage unit yourself, or do you want the storage company to pick them up?

Some companies will deliver [moving](#) storage containers, or pods, to your home. When you have filled the container, you call or email the company, and a truck comes to take the container to the storage facility. The company will bring the container to any address you choose at your request. The service is slightly more expensive than carting your things to the storehouse yourself, but the convenience is incomparable.

When and how often will you want access to your belongings?

Some self storage facilities give you almost unlimited access to your storage unit. Others are open only during certain hours. If you have a storage pod instead of a room, you may need to call in advance to give them time to make the pod accessible. Make a realistic appraisal of how frequently you will need to get to your stored belongings, and choose a self storage facility whose hours and policies are convenient for you.

Will you pay any charges other than the monthly rate?

Some self storage facilities will charge you for accessing your unit. Others require you to buy insurance separately instead of rolling the cost into the monthly price. There are several ways extra charges can make it onto your bill. Read the fine print before you sign the contract, and make sure you know about any extra fees before you commit to paying them.
